

Project Title:Employee Attrition Analysis using MySQL

- Subtitle: SQL-Based Data Exploration and Employee Insights
- Tools Used: MySQL, Employee Dataset, SQL Queries
- My Name: Aishwarya K Lende

Project Overview

“This project analyzes the Employee dataset using SQL queries to uncover insights such as employee attrition, salary tier analysis, experience distribution, city-wise employee count, bench analysis, and more. The main objective of this project is to demonstrate SQL skills in real-world employee data analysis.”

Dataset Description

The dataset contains employee-related information such as:

- Education
- JoiningYear
- City
- PaymentTier
- Age
- Gender
- EverBenched
- ExperienceInCurrentDomain
- LeaveOrNot

Basic Retrieval & Filtering

Que 1 :- Display all employee records.

Query :- SELECT * FROM Employee;

Result Grid		 Filter Rows:	Export: 	Wrap Cell Content: 	Fetch rows: 				
	Education	JoiningYear	City	PaymentTier	Age	Gender	EverBenched	ExperienceInCurrentDomain	LeaveOrNo
▶	Bachelors	2017	Bangalore	3	34	Male	No	0	0

Key Insights

- Most employees belong to Bangalore city.
- PaymentTier 3 employees are higher in number.
- Employees with low experience are more likely to leave the company.
- Benched employees show higher attrition rate.
- Average employee age is around mid-20s.
- Male employees are more than female employees.
- Majority of employees joined after 2015.
- Employees with higher PaymentTier are less likely to leave.

Conclusion

“Working on the Employee dataset using MySQL was a valuable learning experience that improved my SQL knowledge and analytical thinking skills.

- Through this project, I learned:
- Data filtering and retrieval using SQL
- Aggregation and grouping concepts
- CASE statements and conditional logic
- Subqueries and advanced SQL queries
- Employee attrition analysis using real-world data

This project helped me gain confidence in writing SQL queries and understanding employee-related business insights through data analysis.”
